

N77. QUICK AND EASY ADJUSTMENT FOR VALVES

A new vernier adjustment design for valves has been created by Valcor to reduce maintenance time and technician exposure.

The new design allows resetting to be accomplished quickly and without the use of tools. Technicians are able to move the switch up or down with precise increments of a knurled screw.

Existing Valcor Series V526 and V573 valves can be modified at Valcor or in the field to include the new design.

For more, see Nuclear Engineering International, p. 16, January 1991, or contact Rose Lafferty at Valcor (2 Lawrence Road, Springfield, New Jersey 07081, U.S.A.), telephone, (201) 467-8400.
