

N80. SPECIAL CLEANING DEVICES FOR SELLAFIELD

BVC Vacuum Cleaners, a division of DD Lamson, are now performing a wide variety of cleaning tasks at BNFL's Sellafield site.

Among the cleaners is the BVC T500 Type H. It is constructed to meet British filtration standard BS5415 for the collection of hazardous dust. A wide variety of tools enables this machine to be used effectively in a range of areas from production machinery to piping, and its long hose makes overhead cleaning easy.

For more, see Nuclear Engineering International, p. 17, January 1991, or contact Tony Lidgate of DD Lamson, Harbour Road, Gosport, Hampshire, PO12 1BJ, United Kingdom. +44 (0) 705 584271.
