

N81. FAREWELL TO THE MOP AND BUCKET

The Hinkley Point station in the United Kingdom has mechanized the cleaning of the turbine floor hall floors and walkway levels which had previously been cleaned manually by mop and bucket.

Two challenger 640 combined scrubber driers from the Walker-Bradley range of floor maintenance machines were chosen for this task for their ease of servicing and operation.

For more, see Nuclear Engineering International, p. 17, January 1991, or contact Alan Palmer-Rodway of Walker-Bradley, Gladstone Road, Northampton NN57RX, United Kingdom. +44 (0) 604 583191.
