

N121. Collective Doses In European Light Water Reactors

Collective doses for European BWR and PWR reactors are given for the period 1981 through 1990. Collective doses are plotted by cycle number, reactor vendor, number of loops in the PWR plants, by number of cycles average collective dose over 4, 9, 14, or 20 cycles and correlated with the date of commercial operation.

Taken From: "Job-Related Doses in Light Water Reactors," K. Schnuer (Commission of the European Communities, Centre Wagner, L-2920, Luxembourg). Presented at the Workshop on Work Management and Occupational Dose Control, OECD Nuclear Energy Agency, Paris, France, February 4-6, 1992.
