

N139. Alarm Ratemeter

Ludlum Measurements, Inc., has introduced a new alarm ratemeter that can be used with G-M scintillation or air proportional detectors. The M177-71 has an adjustable voltage to 2,500 volts and an adjustable input sensitivity. A benefit of this ratemeter compared to other LMI ratemeters is that it is enclosed in a NEMA 4 box, making it waterproof and useful in outdoor locations or harsh environments.
