

N140. Camera System

I.S.I. Group, Inc. has announced the Model 94 VideoTherm, hand-held portable infrared camera system. The 100% solid-state design enables the elimination of all coolants. The VideoTherm 94 displays the temperature readout of the object being viewed, and the graphics package also includes the date and time, emissivity settings, and a programmable annotation line. The Videotherm camera converts infrared radiation to black and white images showing gradations from hot (white) to cold (black) temperatures. The camera can be connected to any video recorder for video/audio taping of all or any portion of the infrared survey for later analysis or review.
