

### **N205. Report on the 6th Bournemouth Conference on Water Chemistry**

The 6th International Conference on Water Chemistry of Nuclear Reactor Systems was held in Bournemouth, England, October 12-15, 1992. As with previous conferences in this series, it was an excellent and highly technical conference in which the most recent experiences on reactor water chemistry and related research studies throughout the world were summarized. Seventy-eight formal presentations and 34 poster session presentations were made at the meeting. About half the papers and posters presented are available in a bound volume (Volume 1). Most of the other papers and poster descriptions were available as individual reprints and will be published in Volume 2 of the proceedings. The complete set of proceedings will be available from the British Nuclear Energy Society in London at a cost of 120 British pounds.

*It is impossible to summarize the wealth of information that was presented at this meeting in a brief article. However, a member of the ALARA Center staff was in attendance at most of the sessions and a summary of notes taken at the meeting is available through BNL's ACEFAX-1 fax-on-demand system. These notes are contained on 10 pages. To request this document through the ACEFAX-1 system, call 516/282-7361 and request document 19 when prompted.*
