

N317. Video System

Brooks Support Systems, Inc. has introduced an improved version of its original VideoStick. The new version incorporates a smaller, lighter motorized pan and tilt that makes handling easier, as well as an improved solid state controller. It may be operated as a portable unit on a belt or as a stationary unit on a tripod. The unit is ideal for remote monitoring, visual inspection, or surveillance operations.

For more, "New Products, Services, and Contracts - Video System," Nuclear Plant Journal, p. 45, July-August 1994.
