

N3392. Steam Generator Changeout

Framatome Technologies (FTI) has received a letter of intent from Public Service Electric and Gas (PSE&G) to assist with the first-of-a-kind steam generator (SG) changeout at Salem Unit 1. The four Westinghouse-design SGs from the unfinished Seabrook-2 plant will be used as replacements. FTI's workscope comprises inspection, improvement modifications, and removal of the SGs from Seabrook, and shipment to Salem. FTI will also be responsible for installation of the replacements; licensing for the changeout; and testing and inspection upon completion.
