

BNL ALARA CENTER**Processes and Practices Related to Occupational Dose****ID: 1013****VIDEO-TAPING REPETITIVE HIGH-DOSE JOBS****Keywords:** VIDEO TAPE; REPETITIVE JOBS; OPERATIONAL AND MAINTENANCE TECHNIQUES; TRAINING; HIGH-DOSE JOBS**Description:**

Worker productivity is low for new jobs or jobs which are not done frequently. One method to improve productivity and thereby save dose is to show radiation workers video tapes of high-dose repetitive jobs. This allow workers to become familiar with the physical conditions, scope of work, work procedures, and lessons learned. Some repetitive jobs which have been video taped include S/G Inspection and Repair, Refueling, RCP or recirc pump seal replacement, CRD removal/replacement, and core barrel inspection.
