A Day and a Year in the Life of
Effluent Monitoring at Columbia Generating Station

Clay Madden
Scientist – Chemistry Department
Columbia Generating Station

ABSTRACT

The methods used for trending effluent and process monitors on a daily basis will be
demonstrated. In addition, a selection of the key effluent issues faced during the last year
will be presented along with the resolution strategy. These include, Kaman Science
detector replacement project status, monitor issues, sample analysis improvements, bases
documents & records retrieval, drywell leak detection, isokinetic flow, meteorological
tower issues, and reporting heating steam tritium released.
