

Recent Changes to the ANI Engineering Rating Factors

Ed Everett
American Nuclear Insurers

ABSTRACT

Since 1981, American Nuclear Insurers (ANI) has implemented a performance measure for insured power reactors known as the Engineering Rating Factor (ERF). Traditionally, ERF has taken as input the level of activity released from insured power reactors as reported in the annual radiological effluent reports, or their equivalents. Last year, several changes were made to the ERF program and those changes are described here.

Paper presented at the 22nd Annual RETS/REMP Workshop, June 25-27, 2012, Orlando, FL.
