

Evolution of programming tools available and Laboratory Information Technology at GEL

Russell Moser
The GEL Group, Inc – Charleston, SC

ABSTRACT

The laboratory business seems to always present new challenges and requirements that require changes to our system. The increased price pressure and automation required forces a lab to respond to the need. At GEL we are constantly looking for improvements and ways to respond to our clients in a positive way. The information technology arena has been changing rapidly especially over the last few years. This presentation will show some of the advancements we have made using tools that are available to everyone. Two recent programs developed directly impact GEL Laboratories interaction with clients and provide some exciting opportunities for the future.

Paper presented at the 22nd Annual RETS/REMP Workshop, June 25-27, 2012, Orlando, FL.
