

RETS-REMP Workshop Open Discussion - Charting the Future

RETS-REMP Workshop Steering Committee

ABSTRACT

The RETS-REMP Workshop is approaching the 25th anniversary of the Workshop. Consideration is being given to revising the title of the Workshop to reflect the more inclusive nature of the Workshop to include topics such as Groundwater Protection, response to events such as Fukushima, etc. Other organizations which address topical areas related to effluent and environmental monitoring have sought to align their periodic workshops with the RETS-REMP Workshop.

This presentation will provide a forum for open discussion about the future direction of the RETS-REMP Workshop, including workshop title, potential future meeting locations, potential alignment with other organizations whose topics are related to effluent and environmental monitoring, and a request for involvement with the RETS-REMP Steering Committee.

Paper presented at the Annual RETS/REMP Workshop, June 24-26, 2014, Savannah, GA.
